

Your coach, between classes.

A member speaks up. A coach responds.
The next class starts with context.

PRODUCT VISION + LOCAL DEMO

Members can drift before anyone notices.

A question goes unanswered.

A member feels stuck.

The next coach never hears about it.

Our hypothesis: better follow-up makes coaching feel more continuous.

Help members feel known.

Continuity

Someone remembers what I am working on.

Progress

I know what to focus on next.

Accountability

My coach checks back with me.

Keep the coaching going after class.

Collect the question.

Make time for a human response.

Bring the context into the next class.

Designed to work alongside the gym's booking system.

Start in combat sports; test the same loop in other coached activities.

One conversation carries into the next class.

- | | | |
|-----------|----------------------------|---|
| 01 | Attend class | A short follow-up after training. |
| 02 | Ask the coach | Text or a voice note about what happened. |
| 03 | Get a response | The coach checks the queue and replies. |
| 04 | Return with context | Recent feedback informs the next class. |

The class ends. The conversation continues.

INTENDED MEMBER EXPERIENCE

**“How did training go?
Anything you want your
coach to help with?”**

Target: verified attendance + class end + opt-in. Timing is a pilot choice.

In today's demo

A simulated post-class message, triggered in Demo tools.

Live attendance sync is the next test.

A small question, while it is still fresh.

ILLUSTRATIVE MEMBER MESSAGE

**“My jab felt sharper, but I keep
getting countered as I step out.
What should I focus on next class?”**

Text or voice is the target experience.
Today, a typed transcript demonstrates the voice-note path.

A queue the coach can act on.

Read the original.

Review the context.

Send one useful reply.

The coach stays responsible
for the advice.

THE COACHING LOOP

A little feedback. A lot of progress.

Read what happened after class, then send the next useful thought.

Goal: Build confidence and cleaner technique
Left shin sore after checks.
injury - Left shin sore after checks.

SUGGESTED FOCUS - DEMO RULES

Demo suggestion: revisit jab with the group. Adapt individually after checking flags.

What's coming up in the logs

jab footwork clinch guard defense

Generated from stored bookings and recent logs. A flag is context to review, not medical advice.

Two connections. One coaching product.

FEASIBLE, WITH ONGOING INTEGRATION WORK

Build a separate connection for each platform. Both feed the same member, class and attendance records into Cornerwork.

Gymdesk: start by testing its Zapier connection.

Mindbody: use its APIs and event updates, with approved access.

The hard part is reliable syncing: no-shows, duplicate updates, permissions and platform changes. Neither is live in this demo.

Start with one gym. Prove the full loop.

GYMDESK FIRST

Check-In trigger via Zapier

Confirm member, class and end time.
Then test one opted-in adult account.

MINDBODY PATH

Roster events + signed-in status

Confirm access and event behavior.
Reuse the same coaching workflow.

Pass condition: one attended class → one delivered ping → reply → next-class context.

What you are seeing today.

WORKING LOCALLY

Member message → coach queue
Coach response → conversation
Recent logs → class brief

NEXT TO VERIFY LIVE

Attendance and message delivery
Real voice-note capture
Staff access and reliable scheduling

Voice, summaries and delivery are simulated in this demo.

A gym subscription. Optional member add-on.

\$50–100

per gym / month

Proposed platform pricing
to test with pilot gyms.

Optional \$10

member add-on / month

The gym chooses whether
to charge members separately.

5–10 members cover the platform fee before coach labor and other costs.

Make the work clear before adding the tool.

One owner for the queue

Decide who responds and who covers an absent coach.

A realistic response rhythm

Agree when replies happen and how that work is paid.

Measure coach minutes and useful follow-ups during the pilot.

Members choose. Coaches stay accountable.

Opt in, and leave easily.

Begin with consenting adults and reliable opt-out handling.

Human review of advice.

Read the original message; raise concerns without diagnosing.

Before going live: staff permissions, privacy rules and data controls.

A fighter who writes software.

Muay Thai competitor · 9–1–1

Around ten years in Muay Thai, BJJ and wrestling.

Senior software engineer working with AI and data systems.

Built from training experience. Refined with working coaches.

Start small. Measure whether it helps.

START WITH

- One responsible coach
- A small adult member group
- One verified booking connection

LOOK FOR

- Members sharing useful feedback
- Coaches following up
- Willingness to keep paying

Agree the offer and service cadence together before a live pilot.

Would your coaches use this next week?

- 01 How do questions get handled after class today?
- 02 Which coach would own the queue?
- 03 What would make a short pilot worth paying for?
